

WILLIAM E. BOEING
DISTINGUISHED LECTURE

CAN YOU IMAGINE?

THURSDAY, OCTOBER 26
5:30 PM
FOWLER HALL
FREE ADMISSION

Using pop-culture references about advanced technology to frame the discussion, Davis weaves together a story of past, present and future – but the past only as much as it informs future developments. He lays a foundation of how far technology has come and its importance to the continued development of our world. He also shares where he, and many people who work at Boeing on the coolest technologies of our time, believe the world is going. It is a world where machine learning is not only possible, but inevitable... a world where the idea of space travel is commonplace dinner conversation... a world where unmanned aerial vehicles are part of normal operations. Davis will touch on programs that Boeing is working on now that will take us to Mars and beyond.

DARRYL DAVIS

VICE PRESIDENT AND GENERAL MANAGER

BOEING PHANTOM WORKS

VP BOEING ENTERPRISE GENERAL/PROGRAM MANAGEMENT
