

## Abaqus SwiftComp GUI tutorials

This page contains tutorial examples using [Abaqus SwiftComp GUI](#). If you start a new page to share some examples related with this software, please title it with the prefix Ab4SC: so that it will be automatically linked to this page. And please select MainPage/ID:AbaqusSwiftCompGUItutorial as the Parent page to allow easy navigation.

- [Computation of effective thermal conductivity with Abaqus Swift Comp GUI](#)
- [Computation of effective thermoviscoelastic properties with Abaqus Swift Comp GUI](#)
- [Computation of effective viscoelastic properties and time-dependent constituent properties with Abaqus SwiftComp GUI](#)
- [Computation of Viscoelastic properties with Abaqus Swift Comp GUI](#)
- [Predictions of 3D effective properties of fiber reinforced composites](#)
- [Predictions of 3D effective properties of particle reinforced composites](#)
- [Predictions of ABD matrices and 3D effective properties of composite laminates](#)
- [Predictions of local/global stress/strain fields in composite structures](#)
